

panic

FreeBSD 7.0-STABLE ですが、こんな感じで panic .  
で、ソースをアップデートしてみようとしたら、

```
Fatal trap 12: page fault while in kernel mode
cpuid = 1; apic id = 01
fault virtual address = 0x0
fault code = supervisor read, page not present
instruction pointer = 0x20:0xc051f646
stack pointer = 0x28:0xe7c718b0
frame pointer = 0x28:0xe7c7191c
code segment = base 0x0, limit 0xfffff, type 0x1b
= DPL 0, pres 1, def32 1, gran 1
processor eflags = interrupt enabled, resume, IOPL = 0
current process = 4681 (phttpget)
trap number = 12
panic: page fault
```

cvsup でもこけてしまった

```
Fatal trap 12: page fault while in kernel mode
cpuid = 0; apic id = 00
fault virtual address = 0x0
fault code = supervisor read, page not present
instruction pointer = 0x20:0xc051f646
stack pointer = 0x28:0xe7c408b4
frame pointer = 0x28:0xe7c40920
code segment = base 0x0, limit 0xfffff, type 0x1b
= DPL 0, pres 1, def32 1, gran 1
processor eflags = interrupt enabled, resume, IOPL = 0
current process = 1062 (cvsup)
trap number = 12
panic: page fault
```

うーん、phttpget が悪いわけではないのかなあ。

でも、ssh は問題ないんだよなあ。

上記は、ath0 だったので、em0(有線)で試してみたところ無事完了。

うーむ。
